

TAKE YOUR TRAINING TO THE NEXT LEVEL TRAUMA RESCUE MANIKIN

RESCUE AND TRAUMA SKILLS IN ONE TRAINING SCENARIO

If someone needs to be rescued, that person may also have suffered some kind of traumatic injury and therefore rescue teams are under increasing pressure to make sure that they have the skills to provide effective emergency first aid at the scene.

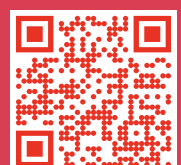

Let us introduce you to the Trauma Rescue Manikin, designed to offer you the opportunity to train for difficult rescues and extrication, whilst providing essential first aid for traumatic injuries including heavy bleeding.

TRANSFORMING RESCUE AND TRAUMA TRAINING

- Rescue and traumatic injury skills training using just one manikin, on location and during extrication.
- The integrated Thigh Wound Packing module is robust, washable and reusable. It features a large traumatic wound with bleeding tubes that enable the trainer to simulate major haemorrhage.
- Supplied with Airway Management Torso to perfect CPR and more advanced airway skills.
- Torso supplied has anatomical landmarks including the sternum, rib cage, and substernal notch. The trainer also contains teeth, uvula, vocal cords, glottis, epiglottis, larynx, arytenoid cartilage, trachea, oesophagus, inflatable lungs and stomach. It allows for placement of a nasogastric tube and accepts Combitube®, E.O.A., E.G.T.A., P.T.L. and i-gel® airways
- Based on a 30Kg Full Body Airway Management manikin, the Trauma Rescue model is tough and robust, perfect for rescue training.
- Three variants available: Base model with torso and leg wound, plus two others featuring IV or IO and IV.
- The optional IV Practise Arm has an intramuscular injection site at the top of the arm and allows for venipuncture to the arm and hand.
- The intraosseous Tibia Task Trainer is designed to simulate intraosseous (IO) needle placement, which includes palpable landmarks at the proximal tibia, allowing trainees to facilitate accurate site location.

“

Increasingly, rescue teams were asking us for a manikin to improve their traumatic injury, emergency first aid skills in a realistic scenario (out of the classroom) - we are therefore really excited to offer a manikin which allows them to move from complex rescue and extrication straight into emergency care training.
